

Group Name: Unpaid Interns

Group Members: Mohab Yousef, Luke Wittbrodt, Cameron Beck, Cameron Stamps.

Q1, and Q2:

1.Balsamiq:

Like: Quick and simple for sketching.

Like least: Limited for detailed testing.

2.Adobe XD:

Like: Can do both sketches and detailed prototypes. Good for collaboration.

Like least: May seem a bit complex for beginners, and advanced features may need payment.

3.Sketch (with InVision):

Like: Creates polished, professional-looking prototypes.

Like least: Only for Mac users, not great for quick sketches

Q3: our group choose Balsamic since it is a good choice if we want to draw the look of resume system fast. It has a style that's like hand-drawn sketches, which helps to think about how the system works, and this will be important for our system because HRs, who review job applications, want things to be simple and work well.

Draft Testing plan:

Use case description: Candidate/Administrator Login to check/edit candidate profile.

Objective: To verify the candidate login process, error handling, request for candidate information, profile display, interview results, and profile management within the application.

Actors: Administrator, Candidate.

Preconditions:

- The application is installed and functional.
- A valid candidate profile and login credentials exist.

Test Steps:

1. Login

- Enter valid candidate login credentials.
- **Expected Result:** Successfully log in with correct credentials.

2. Login Incorrect

- Enter invalid candidate login credentials.
- **Expected Result:** Display an error message indicating that login is incorrect.

3. Request Candidate Info

- After successful login, select the "Request Info" option.
- **Expected Result:** The system should display candidate information.

4. Display Candidate Info

- Select the "Display Candidate Info" option.
- **Expected Result:** The system should display detailed candidate information.

5. Candidate Interview Results Window

- Select the "Candidate Interview Results" option.

- **Expected Result:** The system should display a window with interview results.

6. **Exit**

- Select the "Exit" option.
- **Expected Result:** The application should exit the candidate's profile.

7. **Monitor/Display**

- Select the "Monitor/Display" option.
- **Expected Result:** The system should display a monitoring or display interface.

8. **Edit Profile**

- Select the "Edit Profile" option.
- **Expected Result:** The system should allow the candidate to edit their profile.

9. **Manage Candidate Info**

- Select the "Manage Candidate Info" option.
- **Expected Result:** The system should provide options for managing candidate information.

Postconditions:

- Candidate can log in, access their profile, view interview results, and manage their profile information.
- Any errors encountered during testing are documented for resolution.
